

Find the Location of the Parts

- Head – The front part with eyes, mouth, and antennae
- Antennae – Two feelers that help the butterfly smell and sense movement
- Eyes – Big eyes that help them see light and color
- Proboscis – A long, curled-up straw used to drink nectar from flowers
- Thorax – The middle part where the legs and wings are attached
- Legs – Butterflies have six legs used for walking and tasting
- Wings – Two pairs (front and back) that help them fly and show off colors
- Abdomen – The back part that holds the stomach and breathing holes
